MULTIMEDIA UNIVERSITY

SUPPLEMENTARY EXAMINATION

TRIMESTER 1, 2015/2016

BAC3614 – ACCOUNTING INFORMATION SYSTEMS 2

(All Sections / Groups)

18 NOV 2015
2.30 PM – 5.30 PM
(3 HOURS)

INSTRUCTIONS TO STUDENTS

1. This Question paper consists of 3 pages excluding cover page with 4 Questions only.
 2. Answer all **FOUR** questions. Mark distribution for each question is given.
 3. Please print all your answers in the Answer Booklet provided.
-

QUESTION 1

- a) Technology can improve cash flow in situations where customers send payments directly to the company. For example the existence of electronic fund transfer (EFT) and financial electronic data interchange (FEDI). Briefly explain the process involve with this two (2) technologies. (8 marks)
- b) Identify control that would best mitigate the following threats :
- i. During processing of customer payments, the digit 0 in a payment of RM 204.00 was mistakenly typed as the letter "O." As a result, the transaction was not processed correctly and the customer erroneously received a letter that the account was delinquent.
 - ii. The hours worked field in a payroll transaction record contained the value 400 instead of 40. As a result, the employee received a paycheck for RM 6,257.24 instead of RM 654.32.
 - iii. After processing sales transactions, the inventory report showed a negative quantity on hand for several items.
 - iv. A customer order for an important part did not include the customer's address. Consequently, the order was not shipped on time and the customer called to complain.
 - v. A visitor to the company's Web site entered 400 characters into the five-digit Zip code field, causing the server to crash.
- (10 marks)
- c) Identify two (2) types of threats and appropriate control procedures during ordering and cash disbursements activities in Expenditure Cycle. (7 marks)

(Total: 25 marks)

QUESTION 2

- a) Reliability and availability are considered to be important aspects when it comes to designing any system. In theory, a reliable product is free of technical errors. In practice, however, vendors frequently express a product's reliability as a percentage of system downtime. Evolutionary products such as those that have evolved through numerous versions over a significant period of time are usually considered to become increasingly reliable, since it is assumed that bugs have been eliminated in earlier releases. In view of the above narration, explain what you understand by the term system reliability.

(5 marks)
